I am a writer. My most recent book is *An Electronic Silent Spring* (Steiner Books, 2014).

I endorse Dr. Gary R. Olhoeft's Comment.

Given the complexity, intensity and density of existing and new electronic deployments, if the FCC aims to create meaningful, effective regulations, it must recognize the concerns of electrical engineers, wildlife biologists, geophysicists and physicians. Exclusion of any perspective endangers our environment and the public health. Creating regulations that speak only to engineering needs also endangers our living environment and our health.
